4 gebrauchsfertige, stabilisierte Formazin Primärstandard-Lösungen in Flaschen. Das Set enthält je 500 ml der folgenden Konzentrationen: <0,1, 20, 100, 800 NTU.

StablCal Calibration Standards Kit, for 2100P Portable Turbidimeter. USEPA accepted for calibration purposes. StablCal® Stabilized Formazin Turbidity Standards are true Formazin dilutions developed for use in any turbidimeter. Kit includes 500 mL bottles of <0.1, 20, 100 and 800 NTU standard.

Precise, Pre-mixed Formazin Solutions

With proprietary manufacturing technology, Hach prepares StablCal Standards in precise concentrations at a wide variety of concentrations - providing accurate turbidimeter calibrations.

Based on Formazin Primary Standards

StablCal Stabilized Formazin Standards contain the same light scattering polymer as traditional Formazin primary turbidity standards - and perform equivalently.

Enhanced Stability Saves Time and Labor

While Formazin primary standards can be prepared directly in the lab, the process is labor intensive and time consuming - and the diluted standards are not stable. StablCal is a stabilized version of Formazin - providing repeatable results, without the time and effort required for lab-prepared standards.

Confidence in results

Hach was the first to apply Formazin as a turbidity standard in the drinking water industry, more than 40 years ago. StablCal standards are based on decades of experience in turbidity measurement.
